NEB RADAR · For mediator organisations

Give your young people a voice in the future of their places. NEB RADAR does the checking.

The Mediator Space is your area in NEB RADAR: plan a session in about two minutes, run it on a big screen while young people join on their phones with a code, and share the result with your municipality. No accounts for participants, no control work and no paperwork of your own.

What it does for you

- Plan a session: choose the places, the age band and the activity, and get a session code with a QR code.
- Run it: the group rates the place, does the Space quest and the Compare challenge, and puts its view into words together.
- Share it: a Space report for your municipality, with the group's confirmed statement and the measures it touches.
- Everything prepared: session plan, question sheet, mediator notes, the institution agreement, consent texts and a parent information sheet.

Screen from the NEB RADAR beta

How it works

1. Set up once	2. Try the sample session	3. Run your session	4. See what happened next
Your organisation, your places with photos, and named groups that keep their NEB badges.	Walk a Virtual Best Practice Neighbourhood and see every screen before your first group.	About 75 minutes, or a 45-minute version. The big screen shows only the group's pattern, never one person's answers.	Your results page shows each statement, its status, the group's feedback and how often the report was opened.

Why you can trust it

- Hosted in the European Union (Amsterdam), with AI from European providers (Mistral AI, Paris, for text; Black Forest Labs, Freiburg, for pictures).
- Young people take part without an account, a name or an e-mail address. Individual answers are never published.
- Every group statement and every photo is checked before it is published. No rankings of people, groups or organisations.
- Sessions with 13 to 17-year-olds open once NEB RADAR's safeguarding steps are complete. Until then: adults aged 18 to 30.
- Kept up to date for you: every week NEB RADAR checks for changes to the NEB method, to the rules on safeguarding, data protection and AI, and to proven ways of engaging young people. People review every adaptation before it reaches your sessions.

Built on proven groundwork

ANN RADAR: Neighbourhood assessment research at HafenCity University Hamburg, supported by the ICLEI Action Fund and Google.org (2022 to 2024): three-pillar assessment, benchmarking, a published Playbook.

UrbanTestbeds.JR: Interreg Baltic Sea Region project on young people co-creating urban futures with AI, urban data and storytelling: HafenCity University Hamburg with Aarhus University, Luleå University of Technology, Vidzeme University of Applied Sciences and the cities of Hamburg and Aarhus. Its finding: cultural institutions are the right partners for young people.

The NEB Self-Assessment method: The 29 measures (Key Performance Indicators of the NEB Self-Assessment method, JRC139118) of the European Commission's Joint Research Centre, built into NEB RADAR and extended with young people's voice.

NEB RADAR engages people, identifies and measures spaces in the context of the New European Bauhaus framework, together.
