NEB RADAR · For municipalities

Hear what young people say about your places, ready for your planning process.

Libraries, museums and youth organisations in your city run sessions with young people at your places. What the groups confirm reaches you as a Space report: their statements with the context of each group, the changes they suggest, the 29 NEB measures they touch, the place's open-data profile and its assessment status.

What it does for you

- Space reports you can open with a link and print: no account needed, published statements only.
- Young people's suggestions translated into the measures your planners and funders already use.
- Open-data indicator profiles and assessments with the European Commission's NEB method.
- European hosting and AI, which keeps procurement and data protection reviews simple.

Screen from the NEB RADAR beta

How it works

1. A local partner runs a session	2. The group confirms its view	3. NEB RADAR checks	4. You receive the Space report
A library, museum or youth organisation, with NEB RADAR's materials and checks.	Never one person's answers: the group's statement, with a group card.	Personal details masked, safeguarding checks, then a review before publication.	With the measures, the suggested changes and the comparison with the best practice.

Why you can trust it

- Hosted in the European Union (Amsterdam), with AI from European providers (Mistral AI, Paris, for text; Black Forest Labs, Freiburg, for pictures).
- Young people take part without an account, a name or an e-mail address. Individual answers are never published.
- Every group statement and every photo is checked before it is published. No rankings of people, groups or organisations.
- Group statements are perceptions of young people, not assessments, and are labelled as such.
- Kept up to date: every week NEB RADAR checks for changes to the NEB method and to the EU, German and Danish rules on data protection, the protection of minors and AI that its safeguards rest on. People review every adaptation before it goes live.

Built on proven groundwork

ANN RADAR: Neighbourhood assessment research at HafenCity University Hamburg, supported by the ICLEI Action Fund and Google.org (2022 to 2024): three-pillar assessment, benchmarking, a published Playbook.

UrbanTestbeds.JR: Interreg Baltic Sea Region project on young people co-creating urban futures with AI, urban data and storytelling: HafenCity University Hamburg with Aarhus University, Luleå University of Technology, Vidzeme University of Applied Sciences and the cities of Hamburg and Aarhus. Its finding: cultural institutions are the right partners for young people.

The NEB Self-Assessment method: The 29 measures (Key Performance Indicators of the NEB Self-Assessment method, JRC139118) of the European Commission's Joint Research Centre, built into NEB RADAR and extended with young people's voice.

NEB RADAR engages people, identifies and measures spaces in the context of the New European Bauhaus framework, together.
